Our Story

Ultimate Windows began life in 2001 as a builder, frustrated with the local window suppliers holding up his projects taking matters into his own hands.

In an old tin farm shed at Ebdon, 15 kms from Wodonga in North-East Victoria, the builder had Capral Aluminium drive down his 3km driveway to deliver commercial aluminium profiles to unload them with his tractor (and their truck got bogged...), where he dragged his son in to help make windows for his building projects.

A few years later, the decision to fabricate the Thermeco suite of products and invest in state of the art software and machinery was made and Ultimate Windows was born.

Over the years Ultimate Windows has grown to employ many management, staff and apprentices while taking on greater commercial jobs and in 2007 released the Thermeco product into the Canberra market. With a display at the HIA Home Ideas Centre and local agents for installation and client contact, Ultimate Windows remains committed to quality service in the Canberra market and beyond.

In early 2009 we moved into our new factory at 231 McKoy St, Wodonga and invested heavily in new equipment and systems to ensure our service to our customer really was second-to-none.

We understand that the future of glazing in Australia is in cost-effective, energy efficient windows which is why, in 2014 Ultimate Windows began fabricating uPVC windows to complement our other systems.

2015 was a year of planning and organising, we placed an order for a fully automated uPVC fabrication line from Europe. The commission was completed in early 2016 and proudly we are now one of just a handful of companies in Australia with this new and innovative technology.

The constant strive to look for more energy efficient window systems and improvements in manufacturing techniques have seen Ultimate Windows grow to specialise in uPVC windows, employ over 40 staff, with 5,000 sqm of facilities in Wodonga and showrooms, sales and installations teams in both Canberra and Melbourne. And is still run by the son and his young family – although the builder claims all the credit...

Ultimate Windows will always be at the forefront of changes to the glazing and window industry. Contact us to talk about how uPVC windows can transform your next residential project.

At Ultimate Windows, we are a double-glazing installer and one-stop-shop for all your uPVC window needs. Because we manufacture our windows right here in Australia – and have a professional, in-house installation team –

we can offer you premium grade windows without having to charge exorbitant import fees or installation costs.

That means you can get the highest quality, Australian-made windows installed in your home for an affordable price. Plus, they'll be covered by our industry-leading 12 year guarantee!

Our System

Our Ultimate Art system combines aesthetics and elegance by adapting the style of your home with it's perfect design and detailing. Adding value to your space by adding efficiency, style and comfort.

With a modern and simple design, colour options and elegant finishes, the Ultimate Art system seamlessly blends with the aesthetics and harmony of your design to become a part the overall architecture of the space.

Offering superior insulation the heat transmission coefficient (Uf) of the Ultimate Art system is measured at 1.1 - 1.5W/m²k and thanks to the slim wall design the frame can hold thicker glass panels. This combination offers high-end efficiency allowing for superior thermal performance and less compromise for the consumer.

Reliability in tough conditions is a hallmark of the Ultimate Art system, designed for the elements the system can be configured and installed to meet the requirements of unique conditions we experience in Australia. If you are metres from the ocean, up in the hills or in the bush. We can configure the Ultimate Art system to meet your requirements.

Ultimate Art doe not just perform structurally and effeciently. The system also provides acoustic performace to enhance your indoor space even further. The inherant sound insulation propoerties of uPVC combined with the multi-compartment structure of Ultimate Art work together to reduce the impact of outside noise on your living space.

Our Services

Window Supply

We work directly with builders, architects, home owners and body corporates to provide the very best quality, made to measure frames for any project.

With a focus on the end to end we can liaise with all stakeholders at any stage of the project to ensure that the product suits the needs of the client, the needs of the job and remains compliant to all required standards.

Our team are highly trained and experienced in finding the best solution for your project and are ready with the right information to assist with any stage of your planning. With extensive knowledge in Energy Efficiency, glass options and the current trends in window placement and style, we have everything you need to assist in planning your new home or renovation.

Window Replacement & Installation

We offer end to end service for customers looking to replace the windows in their home. From measure and quote through to removal of old windows and installation of the finished product. We will look after all the details. All with a minimum fuss or disruption to your routine.

We offer a free measure and quote with one of our skilled sales team, aiming to get you the most accurate price up front.

We manufacture in Australia and use no subcontractors meaning there is no middle man or hidden costs. We manage the process end to end giving you one port of call for queries and questions.

So, if it is a free measure and quote, quality installation or full aftersales service. You will always be dealing with Ultimate Windows.

WE OFFER A 12 YEAR WARRANTY

We're so confident in our product that we are willing to back them with a 12 year warranty. That is more than double the industry standard.

We strive to manufacture the finest quality products that will perform at the highest standard for many years to come.

Ultimate Windows are a PLATINUM member of the Australian Window Association accreditation program.

Window Options

Tilt & Turn

Tilt and Turn Windows use revolutionary European hardware which allows both a tilt in and an opening (turn) function. Our most cost-effective option, the Tilt and Turn Window allows secure night time ventilation with the tilt function – while also giving you as much ventilation as a sliding or louvre window via the turn function.

With multi-point locking, double and triple glazing and double or triple compression seals, the Tilt and Turn Window can seal to a Passive House standard. It's a stylish, innovative option for your home which will reduce external noise, slash your energy bills and help you maintain a comfortable temperature all year round.

Awning

Awning windows have been a much-loved choice in Australia for many years. Now, incorporating US-designed hardware into our European uPVC profiles, we can recreate the traditional awning as an energy-efficient uPVC window.

This means you'll keep all the benefits of a traditional awning window, such as the superior ventilation and protection from rain when open – but you'll also enjoy the advantages of our uPVC windows, too. You'll have a more comfortable home, less external noise and a lower energy bill, year after year. What's not to love?

Casement

Casement windows have been common place in Australia for many years. The key lock enables you to open the window to your preferred depth, so you can allow as much or as little breeze as you want to enter your home. Plus, because they open outwards, it still means you can enjoy your preferred choice of blinds.

By incorporating US-designed hardware into our European uPVC profiles, we have reimagined the traditional casement as an energy-efficient uPVC window. You'll be able to make your home more comfortable, reduce external noise and slash your energy bills!

Sliding Windows

Sliding Windows have long been a favourite for Australians – they have a classic appearance, are easy to use and allow for a great view of your backyard or garden. Our Sliding Windows enable you to enjoy all these benefits – with the added advantages brought by uPVC and Double Weatherpile seals.

You'll be able to reduce your energy bills, maintain a comfortable temperature all year round and reduce disturbances from outside noise. Plus, you'll have a quality product which adds a stylish finish to your home and lasts for years to come!

Servery Windows

Magnaline is a revolutionary swing and slide bi-fold system developed in the US, that has been brought to Australia exclusively by Ultimate Windows. Commonly used to create bi-fold doors, Magnaline can also be installed to create the perfect servery window.

With Magnaline windows, you can create a convenient, wide opening between your kitchen and outdoor space – while enjoying a much better seal than traditional options to block out unwanted noise. Plus, you'll also enjoy the regular benefits of uPVC like superior comfort control and lower energy bills!

Tilt & Slide

Utilising superior European hardware, our Tilt & Slide Windows allow a sash to not only slide away, but also tilt inwards to provide passive ventilation. They're absolutely perfect for a servery window in your kitchen, a restaurant or café.

Double or triple glazed, air tight seal and multi-point locking ensure you have a high quality product that will not only last for years, but will also make your home more comfortable and help slash your energy bills. You can also couple your Tilt and Slide Windows with an external retractable flyscreen, our proprietary flyscreen system or a security screen to suit your needs.

Door Options

Entry Doors

Traditionally, a timber hinged and entry door is a thermal weak point for any home. With a lack of quality seals, you can often see light peeking through or notice a cold draught in Winter. With our double or triple compression-sealed uPVC doors, you'll never have to deal with this problem again! All our doors have multi-point locking mechanisms to ensure a superior seal – even up to Passive House standard!

We also offer Barn Doors which provide a tilt and turn window inside your hinged door. These are perfect for use in a laundry where there isn't room for a sidelight window and you'd still like to safely ventilate the room.

French Doors

A timber hinged French door is typically a thermal weak point for any home – with a lack of quality seals, daylight is often visible between the door and jamb. Not so with our double or triple compression-sealed uPVC hinged doors. All our doors have multi-point locking mechanisms to ensure a tight seal, even up to Passive House standard!

Double and triple glazed, double and triple sealed, and multi-point locking ensure you'll have a high quality product that not only looks stylish, but also makes your home more comfortable, reduces external noise and helps slash your energy bills.

Sliding Doors

Sliding Doors are the perfect way to generate flow between your indoor and outdoor entertaining areas. Because our proprietary flyscreens are standard, you can let in a refreshing breeze on a warm Summer's night without having to worry about those pesky bugs.

Our uPVC Sliding Doors are double glazed and double sealed so you can enjoy a more comfortable home, reduced outside noise and lower monthly energy bills. You'll create a seamless transition to your beautiful outdoor space and enjoy a high-quality product that lasts for many years to come!

Lift & Slide

Our uPVC Lift & Slide Doors utilise unique hardware to combine a sliding sash with the benefit of double compression seals. The result is a stylish door that not only slides smoothly, but can also be sealed to a Passive House standard!

Double or triple glazed, double sealed and multi-point locking ensure you'll enjoy a high quality product that looks amazing and makes your home more comfortable in all seasons. You can couple your Lift and Slide Door with a retractable flyscreen, our proprietary flyscreen system or a security door – so you get the perfect solution to suit your home and needs.

Magnaline

Magnaline doors are a revolutionary swing and slide hardware system developed in the US – and have been brought to Australia exclusively by Ultimate Windows. This uPVC system enables doors to function as both swing and slide – the result is a bi-fold with a superior seal that significantly reduces outside noise.

Magnaline doors are the perfect option if you want to create a seamless indoor-outdoor space. Retractable screens are optional, so you can enjoy your deck or patio area while keeping the bugs at bay. Plus, double glazed, double sealed and multi-point locking ensures you have a high quality product that makes your home more comfortable and lowers your annual energy bills!

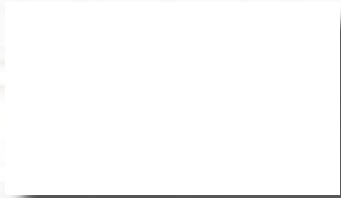

Tilt & Slide

Utilising superior European hardware, our Tilt and Slide Doors allow a sash to not only slide away, but also tilt inwards to provide passive ventilation. They're absolutely perfect for that tight space where you want both a door and window in the one location.

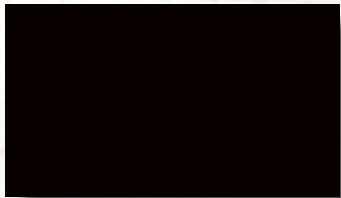

With double or triple compression seals, our Tilt and Slide doors seal to a Passive House standard – so you can slash your energy bills while maintaining the perfect temperature all year round. You can also couple your Lift and Slide Door with an external retractable flyscreen, our proprietary flyscreen system or a security door to suit your home and needs.
